MEZZANINE FLOORS

The Cost Effective Way to Create More Space

EUROMECH MEZZANINE FLOORS bring your industrial or retail workspace to a new level, transforming unused overhead areas into space that works. All mezzanine systems are fully engineered for maximum strength, stability and function. Euromech prides itself on providing a comprehensive service that is of the highest standard, with each mezzanine floor specifically designed and manufactured to suit your needs.

Handrails

Stairs

Pallet Access Gates

Safety

Various handrail systems are available, as well as pallet access gates and loading plates for unloading and loading goods. Column guards are available to protect your mezzanine floor columns from any potential fork lift truck impact.

Fire Protection

Full Fire Protection can be provided and certified in accordance with client requirements.

Single or Multi-Tier Mezzanine?

If your warehouse has excessive headroom, perhaps a two storey mezzanine maybe the answer to your space problem. Euromech can assist you in designing a solution to maximise your storage or office space.

QUALITY - FIRST TIME, EVERY TIME

WAREHOUSE & DISTRIBUTION

It is the current trend for large distribution centres to maximise floor plan square footage with the addition of a single, two or three-tier mezzanine floor.

Euromech handles warehouse and distribution projects of every size – from the supply of a storage platform or racking system through to a fully integrated fit-out.

The company works closely with its customers to get the most out of the available space and to install materials handling systems that make a real difference to productivity.

PRODUCTION & STORAGE

Euromech understands the need to integrate people and processes in the production environment. From a full production area fit-out covering storage and racking systems, materials handling and partitioning to the installation of a mezzanine floor, Euromech will tailor its design to your specific requirements.

OFFICE

Create an office area above or below your mezzanine floor. Euromech regularly undertakes projects that incorporate other services including partitioning, lighting, heating, ceilings, ventilation and furniture. The company works closely with these other trades to ensure the mezzanine installation is of the highest quality.

RETAIL

Euromech's reputation in retail has grown considerably over the past few years and the company is now an established leader in the sector.

Whether you need a seamless addition to your sales floor area, more back-of-store storage or extended office space, a mezzanine floor provides the most economical and flexible option.

A COMPLETE SERVICE

Euromech will undertake a complete site survey and produce detailed drawings and structural calculations on your behalf. That way you can be sure that your mezzanine floor will be right first time and installed in the shortest timeframe possible.

Manufacturing

Euromech uses the latest manufacturing equipment within its fabrication unit, enabling it to turn around mezzanine projects very quickly.

Installation

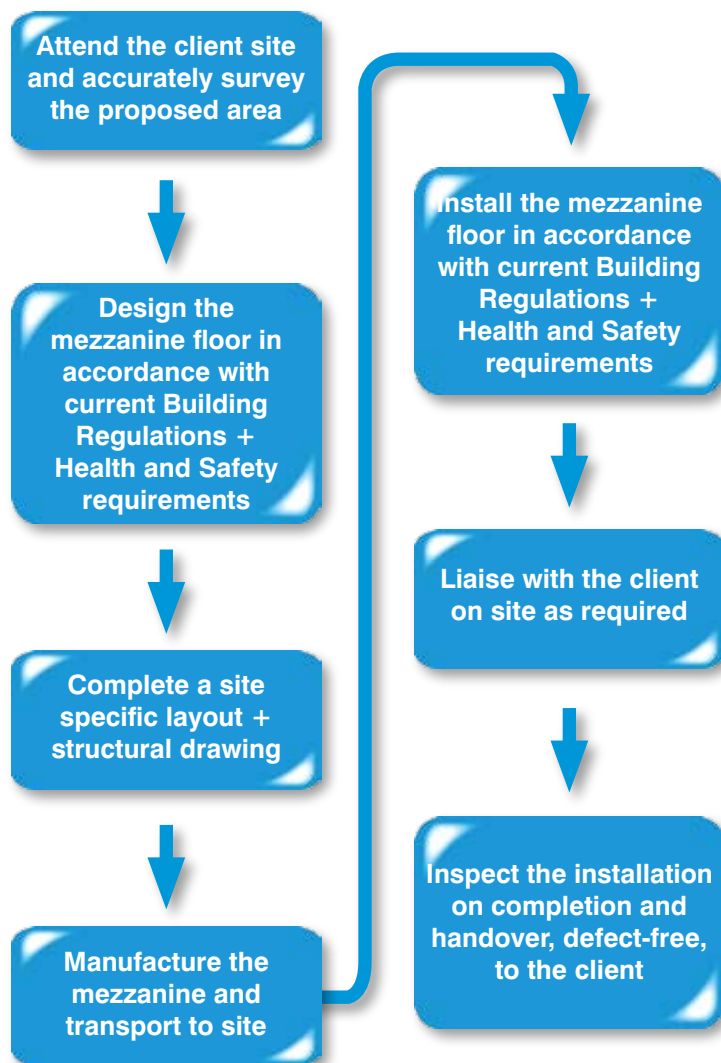

Fast, efficient and hassle free installations, undertaken by Euromech's own qualified teams. Disruption is kept to a minimum, and a new working environment created whilst your business growth continues.

Quality

All Euromech mezzanine structures are designed in accordance with the latest Building Regulations and Health and Safety Regulations.

Project Management

Mezzanine floor construction requires detailed project management. Here is a summary of Euromech's 7-step process to defect-free mezzanine flooring.
